Project Manager: Peter Bell

Site Supervisor: Rodney Bucklar

PROJECT SYNOPSIS

- 21,500m² of full width insitu stabilisation
- 4,000t of shape correction gravel
- 21,500m² of primer seal
- 24,500m² of second coat/reseal
- Installation of road furniture and linemarking.

Project Overview

Milray Contracting were awarded the \$450,000 package from Minjar as part of Minjar Gold ongoing maintenance and upgrade of their mine access and onsite haul roads. The contract was awarded based on value for money and a proven track record of delivery of various other projects for the company over a number of years.

The package involved the addition of shape correction material with locally won gravel material, blending of that material with the existing pavement materials, pavement cement insitu stabilisation and twin coat bitumen sealing.
